Courses Handling Faculty:

Dr.Hafizur Rahman

Associate Professor

INTRODUCTION

1

➤ The **Skill Marketplace** is a web-based application developed to connect users who want to learn or offer skills in a centralized digital platform.

2

➤ This system provides an online marketplace where users can browse courses, enroll in skill-based programs, and enhance their knowledge in various domains.

3

➤ The platform allows administrators to manage courses, monitor users, and maintain the overall system efficiently.

4

5

➤ It simplifies the process of skill learning and sharing by providing an organized interface for course management and enrollment.

6

7

➤ It simplifies the process of skill learning and sharing by providing an organized interface for course management and enrollment.

8

9

➤ This system is developed using **PHP and MySQL on XAMPP server**, ensuring reliable data storage and efficient backend processing.

PROBLEM STATEMENT

1

➤ Many individuals possess valuable skills but lack a proper platform to showcase and monetize them effectively.

2

➤ Users often face difficulty in finding reliable and structured skill-based courses in one place.

3

➤ There is no centralized system to connect learners with skilled professionals or course providers.

4

➤ Existing platforms are scattered, making course discovery and access inefficient.

5

➤ Lack of proper tracking makes it difficult for users to manage enrolled courses and learning progress.

6

➤ Manual or poorly designed systems reduce efficiency in handling users, courses, and enrollments.

7

➤ Limited accessibility to skill-based opportunities restricts personal and professional growth.

8

9

➤ Absence of an integrated system leads to poor communication between learners and course providers.

OBJECTIVE(S)

1

➤ **To design and develop** a web-based Skill Marketplace platform using PHP and MySQL.

2

➤ **To provide** a centralized system for users to explore and enroll in skill-based courses.

3

➤ **To enable** users to register, login, and manage their profiles securely.

4

➤ **To implement** a course management system for adding, updating, and deleting courses by the admin.

5

➤ **To allow** users to enroll in courses and track their enrolled courses through a dashboard.

6

➤ **To ensure** secure authentication and data management using session handling and database integration.

7

➤ **To provide** an interactive and user-friendly interface for better user experience.

8

➤ **To improve** accessibility to skill development and learning opportunities through a digital platform.

9

PROPOSED SYSTEM

1

➤ The proposed system is a web-based Skill Marketplace application developed using PHP and MySQL.

2

3

4

➤ It allows users to register, login, and manage their profiles securely.

5

➤ The system enables users to explore a variety of skill-based courses in one platform.

6

➤ Users can enroll in courses and access them through a personalized dashboard.

7

➤ The admin can add, update, and delete courses efficiently through an admin panel.

8

9

➤ The system maintains enrollment records for tracking user activity and course participation.

PROPOSED SYSTEM ARCHITECTURE

PROPOSED SYSTEM ARCHITECTURE

SKILL MARKETPLACE

PROPOSED SYSTEM ARCHITECTURE

► Input

Users enter registration details, login credentials, and select courses through web forms. They can browse courses and perform enrollment actions.

► Processing

PHP processes user requests, handles authentication, manages course enrollment, and executes necessary operations through server-side logic.

► Database

MySQL database stores user details, course information, and enrollment records using relational tables.

► Output

- The system displays available courses, enrolled courses, and user dashboard information in the browser with real-time updates.

WORKFLOW

TECHNOLOGIES USED

1

2

3

4

5

6

7

8

9

- **Frontend:** HTML5, CSS3, JavaScript
- **Backend:** PHP
- **Database:** MySQL
- **Server:** XAMPP (Apache Server)
- **Tools:** VS Code, phpMyAdmin
- **Hardware/Software:** Windows OS, XAMPP Server

MODULE DESCRIPTION

1

Module 1: User Management

Handles user registration, login authentication, and profile management within the system.

2

3

4

Module 2: Course Management (Admin Module)

Allows the admin to add, update, and delete courses available in the marketplace.

5

6

Module 3: Enrollment Management

Enables users to enroll in courses and manages enrollment records efficiently.

7

8

Module 4: Dashboard Module

Displays user-specific data such as enrolled courses and provides admin overview of courses and users.

9

IMPLEMENTATION SCREENSHOTS

1

➤ The **Home Page** serves as the main navigation interface of the Skill Marketplace system.

2

➤ It provides quick access to all major modules such as Courses, Dashboard, and Profile.

3

➤ The **Dashboard** allows users to view enrolled courses and track their learning activity.

5

➤ The **Admin Panel** enables management of courses, users, and system operations efficiently.

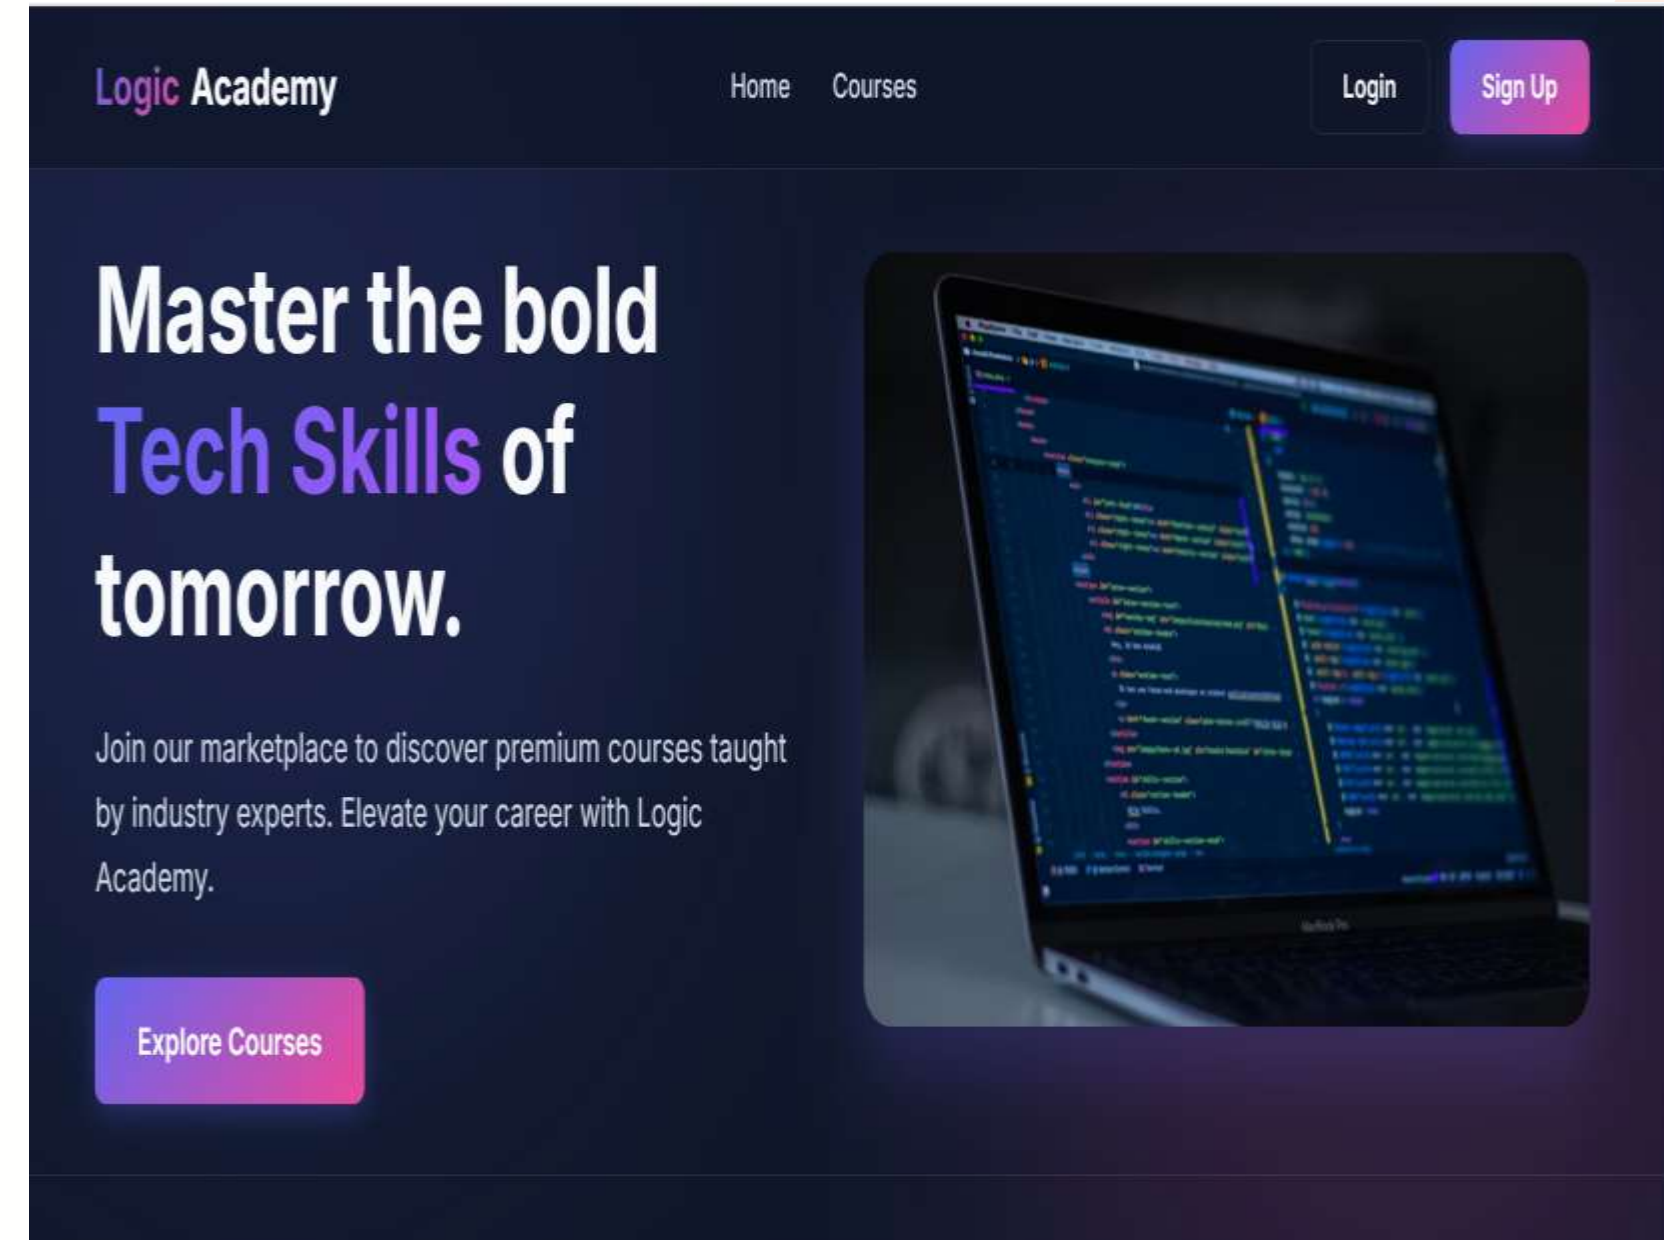

6

7

8

➤ The interface is designed to be simple, user-friendly, and responsive.

9

IMPLEMENTATION SCREENSHOTS

1

2

3

4

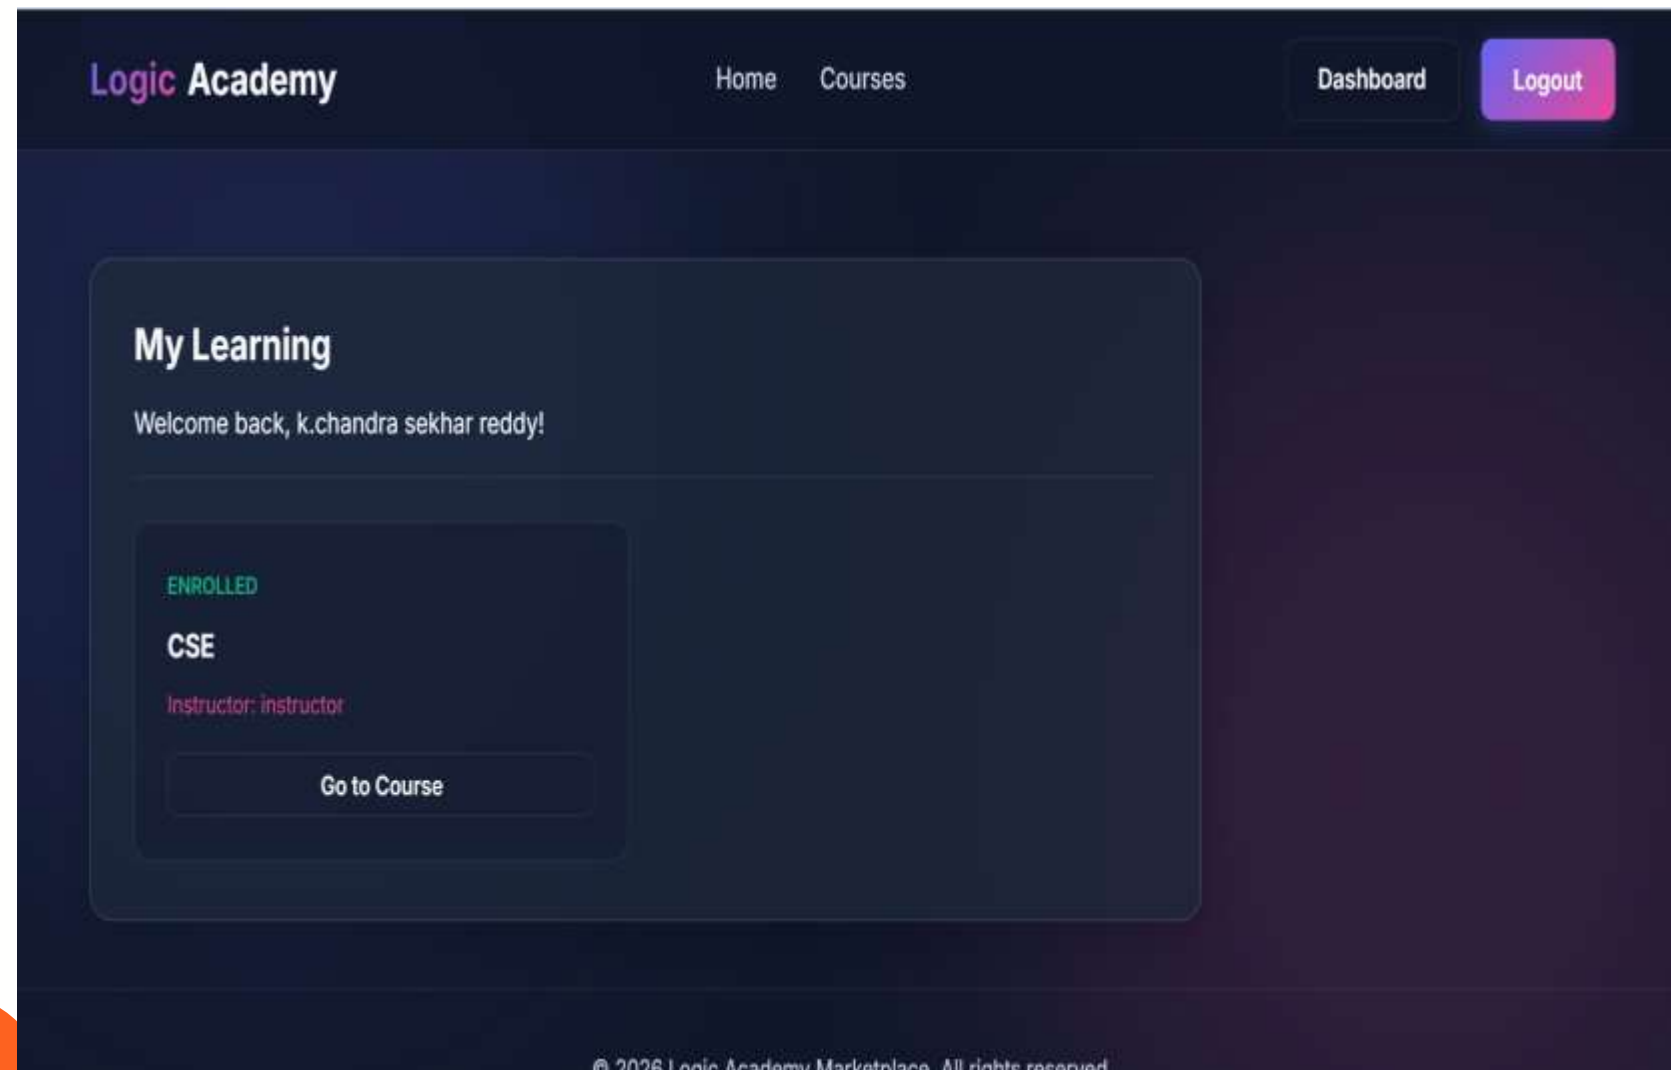

5

6

7

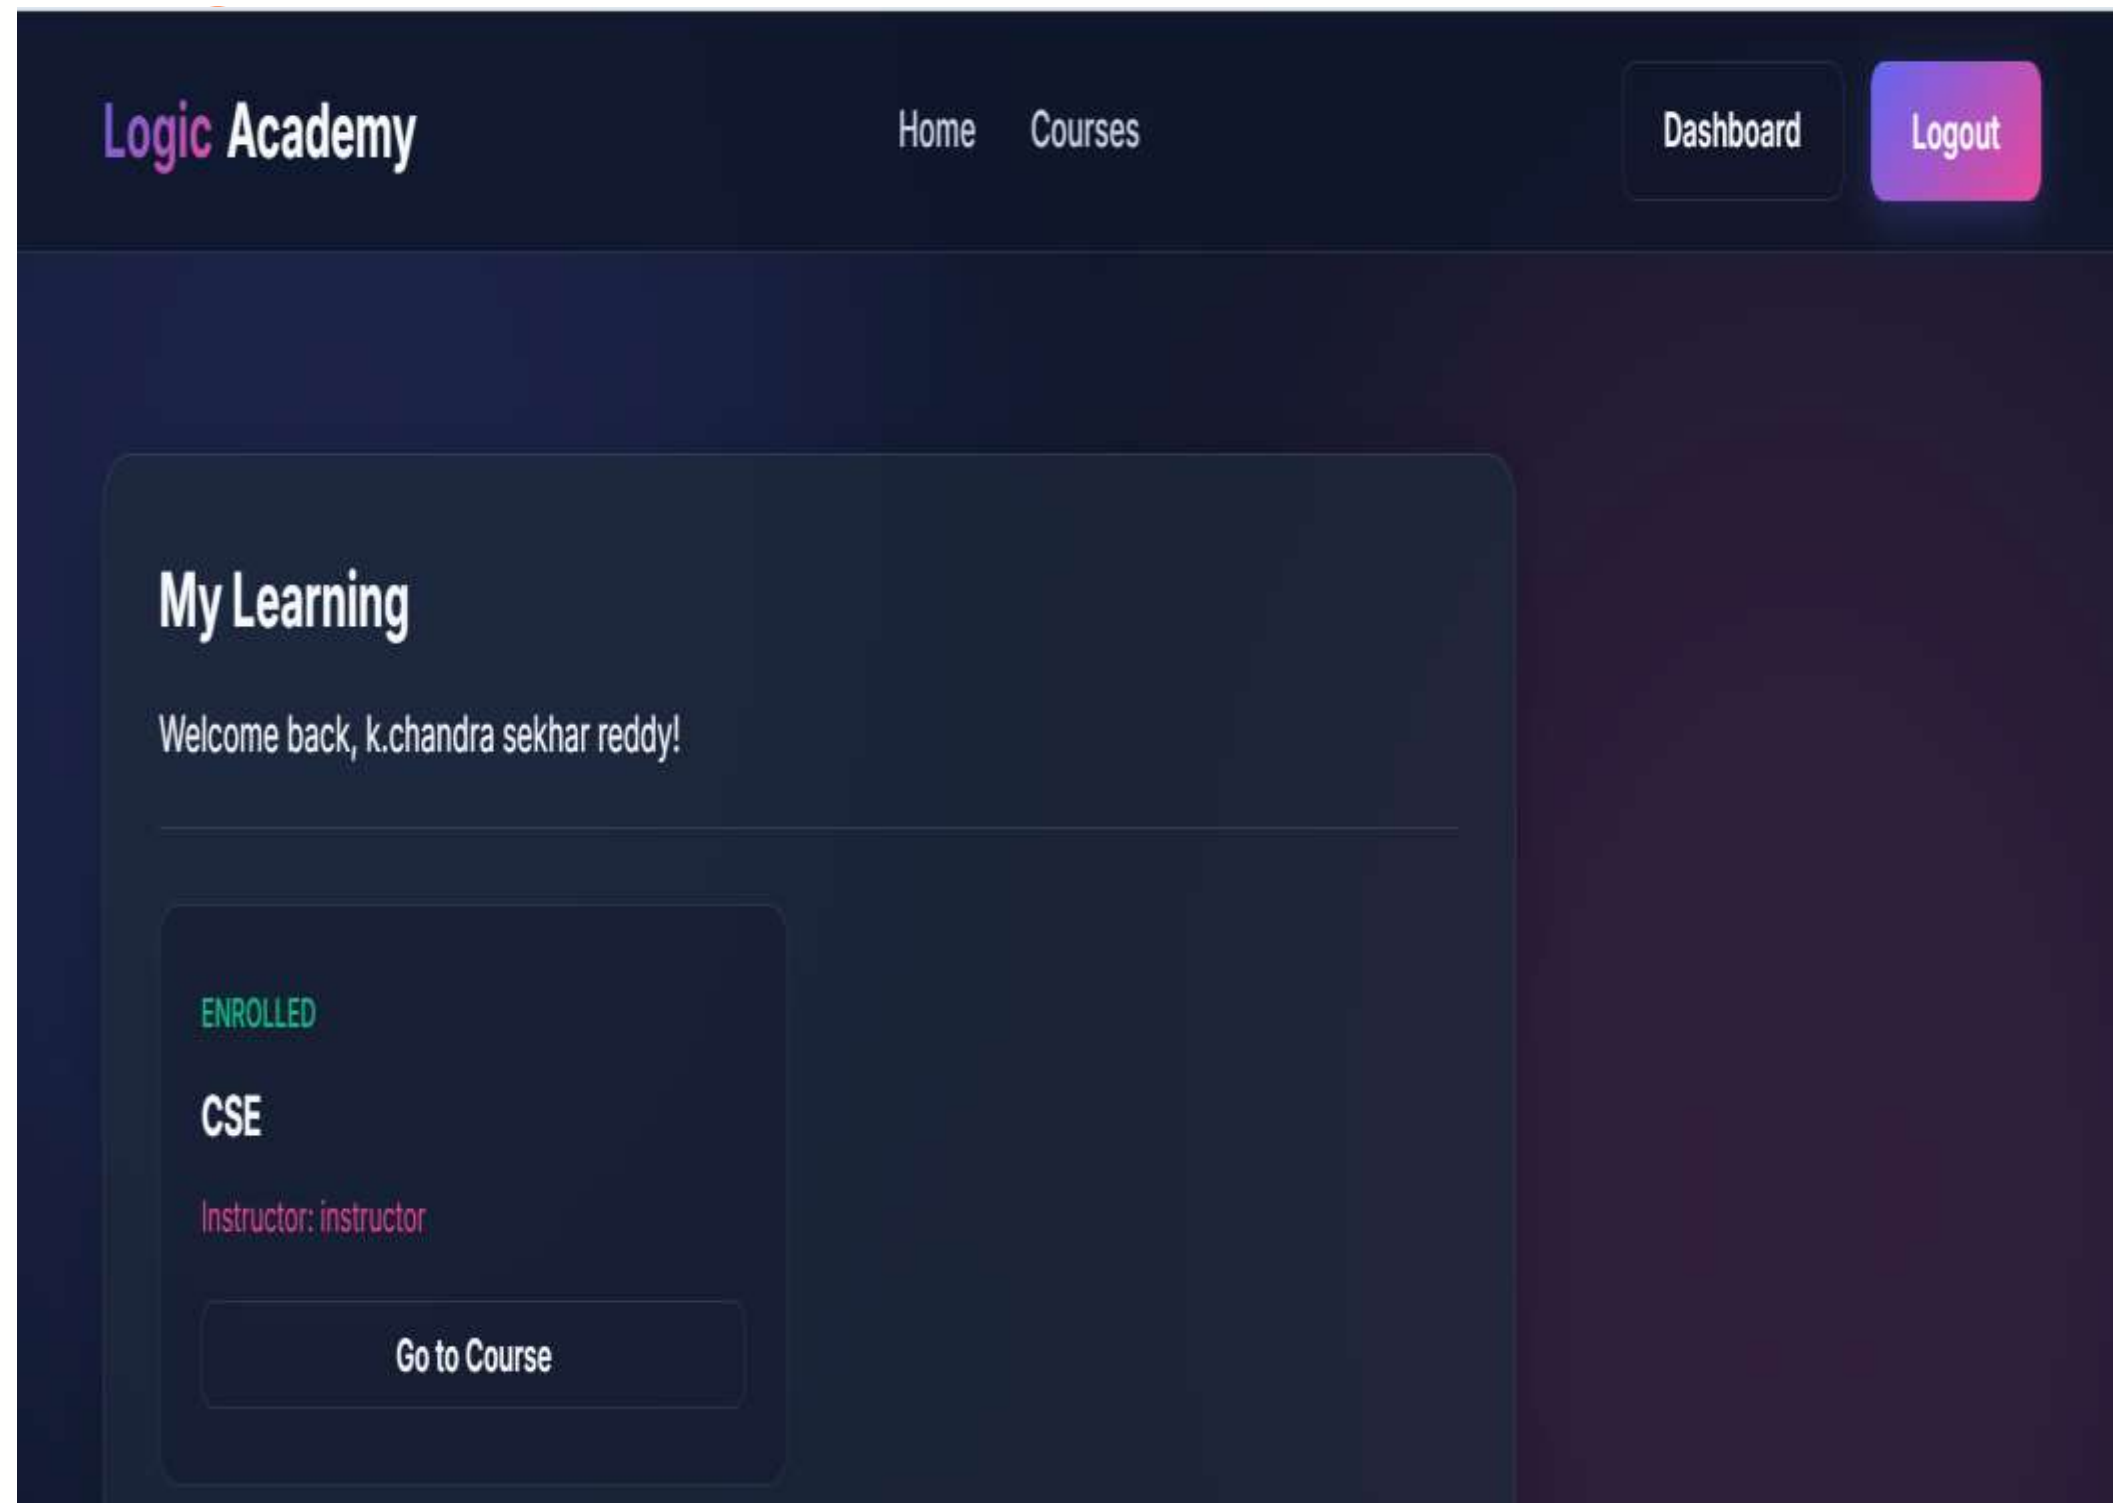

8(A)

9

- The Dashboard provides a summary view of the Skill Marketplace system.
- It displays important information such as **Total Courses, Enrolled Courses, and User Details.**
- These values are dynamically fetched from the MySQL database.
- It helps users quickly view their enrolled courses and track their learning progress.
- The admin dashboard provides an overview of total users and available courses.
- It improves decision-making by showing real-time data.

IMPLEMENTATION SCREENSHOTS

Course Enrollment MODULE

- The Course Enrollment module allows users to enroll in available courses in the Skill Marketplace.
- The user selects a course and clicks on the enroll button through the courses page.
- The enrollment request is sent to the PHP backend for processing.
- The system verifies the user session and checks course availability.
- PHP inserts the enrollment details into the MySQL database.
- The enrollment records are stored with user ID and course ID for tracking.
- The user dashboard is automatically updated after successful enrollment.
- Users can view their enrolled courses and manage them easily..

IMPLEMENTATION SCREENSHOTS

4

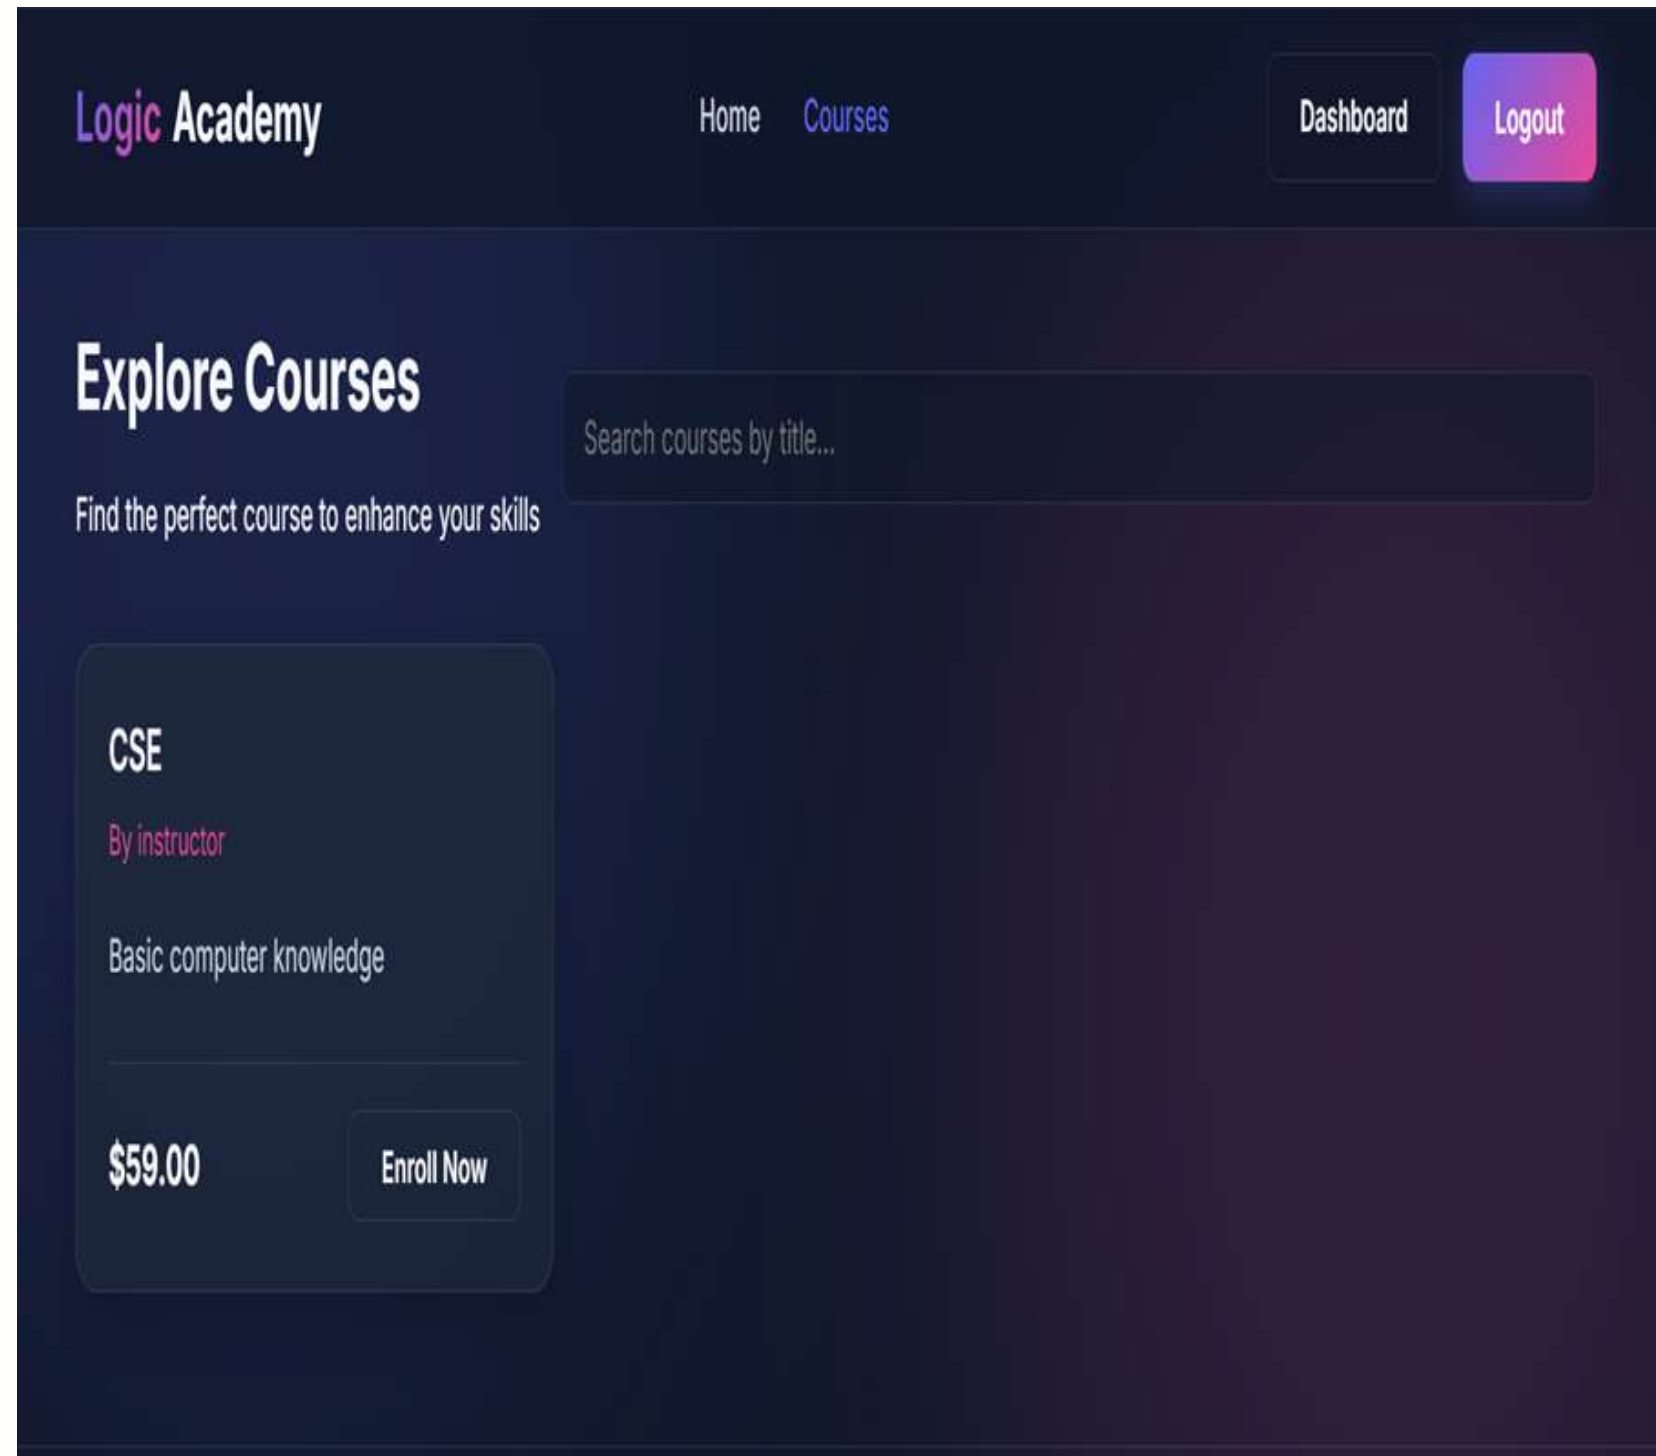

5

6

7

8(C)

9

Delete Course Module:

- The Delete Course module allows the admin to remove existing courses from the Skill Marketplace.
- The admin selects a course and clicks the delete button from the courses list.
- A request is sent to the PHP backend for processing.
- The system verifies admin authorization before performing the delete operation.
- PHP executes a delete query to remove the selected course from the MySQL database.
- The course list is automatically updated after deletion.
- This module helps maintain accurate and updated course information.

ADVANTAGES & LIMITATIONS

1

➤ **Advantages**

- Provides a centralized platform for skill learning and course access
- Easy-to-use and user-friendly interface
- Enables quick course enrollment and management
- Reduces manual effort in course handling
- Provides real-time updates on enrolled courses
- Improves accessibility to skill development opportunities

2

3

4

5

6

7

8

➤ **Limitations**

- Designed mainly for small-scale usage
- Limited advanced features like live classes or video streaming
- Requires internet or local server (XAMPP) to run
- No integrated online payment system (if not implemented)
- Basic security features (can be enhanced further)

9

Thank you
