Campus Event Management System

SDG: SDG No – SDG Title(Example: SDG 4 – Quality Education)

Presented By:

K.Chandra Sekhar REDDY – VTU26619–

Reg.No.23UECS0763

Courses Handling Faculty:

Dr. Hafizur Rahman–Assistant Professor

INTRODUCTION

1

➤ **Background of the problem**

- Manual Tracking: Notice boards and WhatsApp messages are hard to follow.
- Late Updates: Students miss changes in event time or venue.
- Paper Records: Managing registrations by hand is slow and causes errors..

2

➤ **Why this project is important**

3

- Central Portal: One website for all campus activities.
- Live Dashboard: Admins update events instantly for everyone.
- Digital Storage: All data is saved safely in a database.

4

5

➤ **Real-world relevance**

6

- Colleges: Tech fests, sports, and seminars.
- Offices: Meetings and staff training.
- Events: Local workshops and community programs.

7

8

➤ **Brief overview of the system**

9

- Design: HTML5 & CSS3.
- Backend: Java (Servlets) or PHP.
- Database: MySQL (via XAMPP)

PROBLEM STATEMENT

1

- Event updates are shared manually through messages

2

- People often miss important event changes

3

- No single platform to create, update and track events

4

- Difficult to notify everyone at the same time

5

- This leads to confusion, delays and miscommunication

6

- Tracking multiple events at once is very hard

7

- There is no automatic alert system for event status changes

8

9

- Organizations lose time and productivity due to poor event coordination

OBJECTIVE(S)

- 1 - To create a system to manage campus events easily in one place.
- 2 - To allow students to register for events online without paperwork.
- 3 - To help organizers schedule events and book venues without conflicts.
- 4 - To send notifications to students about upcoming events.
- 5 - To maintain a record of all events conducted in the campus.
- 6 - To provide separate login for admin, organizers, and students.
- 7 - To generate reports on event attendance and participation.
- 8 - To make event management faster, easier, and error-free.
- 9

PROPOSED SYSTEM

1

- Users can register and login with their own account

2

- Organizers can create and manage events easily

3

- Students can register for events online

4

- Venues can be booked without conflicts

5

- Notifications are sent for upcoming events

6

- Attendance is tracked digitally

7

- Admin can view reports and statistics

8

9

- Students can give feedback after events

PROPOSED SYSTEM ARCHITECTURE

WORKFLOW

RESE Workflow

TECHNOLOGIES USED

- **Frontend:**

HTML5 — structure of web pages

CSS3 — styling and design

JavaScript — real-time polling and dynamic updates

- **Backend:**

PHP — handles all server-side logic

Session management — keeps users logged in securely

- **Database:**

MySQL — stores users, events, notifications and updates

phpMyAdmin — used to manage the database visually

- **Tools:**

VS Code — code editor

Eclipse IDE — project management

- **Hardware/Software Requirements:**

Any computer with minimum 4GB RAM

Internet browser (Chrome, Firefox, Edge)

Windows OS

XAMPP v3.3.0

Any modern web browser

MODULE DESCRIPTION

1

Module 1: User Management

Handles user registration, login and logout with secure session-based authentication.

2

Module 2: Core Processing

Implements real-time event creation, status updates and JavaScript polling every 4 seconds to sync data automatically.

3

4

5

Module 3: Database Management

Manages data storage and retrieval using MySQL with 4 tables — users, events, event_updates and notifications.

6

7

8

Module 4: Reporting & Analytics

Displays live event dashboard with status filters, bell notification count and toast messages for better decision-making.

7

8

9

- This is a university sign-in screen. Just enter your email and password, then click the blue button to log in.
- A simple login page for a college portal. It has spaces for your email and password, plus a "Sign In" button.
- A student login page. You enter your account details and click the blue button to access the campus website.

9

A screenshot of a web application's 'Create Account' page. The page has a dark background with a blurred image of people. At the top, there is a blue square icon with a white graduation cap. Below it, the text 'Create Account' is displayed in white, followed by the subtitle 'Join the campus event community'. The main form is a dark gray box with rounded corners, containing four input fields: 'Full Name' (with 'John Doe' entered), 'Email Address' (with 'you@university.edu' entered), 'Password' (with 'Min 6 characters' as a placeholder), and 'Department' (a dropdown menu with 'CSE' selected). Below the form is a large blue button with a white checkmark and the text 'Create Account'. At the bottom of the form, there is a link that says 'Already have an account? Sign In'.

- This is a sign-up page to join a campus event community.
- To create an account, you fill in your full name, email, password, and department, then click the blue Create Account button.

 The Great Debate Oratory Club	15:00		Summit Hall B	0 / 80	    

This image shows an admin "Event Catalog" dashboard displaying a table of organized event listings with columns for details, schedules, venues, registrations stats, and quick management actions.

ADVANTAGES & LIMITATIONS

1

➤ **Advantages:**

2

Real-time updates without refreshing the page

3

Easy to use for anyone — simple and clean interface

4

Instant bell notifications when event status changes

5

Secure login system protects user data

6

All events stored safely in MySQL database

7

Works on any device with a web browser

8

➤ **Limitations:**

9

Works only on local server (XAMPP) — not live on internet

Requires XAMPP to be running every time

No mobile app — only works on web browser

Only one admin role — no different user permissions

No email notifications — only in-app bell alerts

Internet connection needed for browser to work

Thank you
